

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {

        Scanner scanner = new Scanner(System.in);

        int[] vetor = new int[20];
        int pares = 0;

        System.out.println("Digite 20 valores: ");

        for(int i =0; i < vetor.length; i++){
            vetor[i] = scanner.nextInt();
            if(vetor[i] % 2 == 0){
                pares++;
            }
        }
        System.out.println("Ao total são " + pares + " numeros pares");
    }
}
```
